

Presenting Multiple Views of the Same Data

Ability to see multiple views of the same data is an invaluable tool for the end users of your applications. It provides increased productive due the reduced time spent while searching for data.

Let's generate a Data Aquarium Framework application from the *Northwind* database and research the multiple view presentation capabilities of the framework. If you run the application and select *Customers* option from the drop down at top of the page then the following view of customers is displayed.

At the right side of the blue tool bar above the grid you can see the orange view selector that shows *Customers* in it. You can expand the list of views to provide alternative presentation of data without any coding.

Suppose you want to display phone and fax information on screen and don't really care if the customer *ID* is available. Open the *~/Controllers/Customers.xml* data controller descriptor file in Visual Studio 2008 and add the following markup in the *views* section:

This is how the data will be presented if you refresh the page and select the name of the new view in the view selector. Notice that each view maintains its own sorting, adaptive filtering, and current page when you switch from one view to another.

You may also provide an alternative query to produce data displayed in the view. Imagine that you want to have a quick way to list all customers from United States of America. You will need to define the following command in *commands* section of the data controller:

```
<command id="command2" type="Text">
      <text>
        <! [CDATA[
select
    "Customers"."CustomerID" "CustomerID"
    ,"Customers"."CompanyName" "CompanyName"
    ,"Customers"."ContactName" "ContactName"
    ,"Customers"."ContactTitle" "ContactTitle"
    ,"Customers"."Address" "Address"
    ,"Customers"."City" "City"
    ,"Customers"."Region" "Region"
    ,"Customers"."PostalCode" "PostalCode"
    ,"Customers"."Country" "Country"
    ,"Customers"."Phone" "Phone"
    ,"Customers"."Fax" "Fax"
from "dbo"."Customers" "Customers"
where
  "Customers"."Country"='USA'
]]>
      </text>
```

</command>

Also add the following view in the *views* section:

View grid3 is referring to command2 in the commandId attribute of the view element.

The following presentation will be available to application users from now on. Independent sorting, paging, and current page are automatically maintained for this view as well.
